

Welcome to Javascript

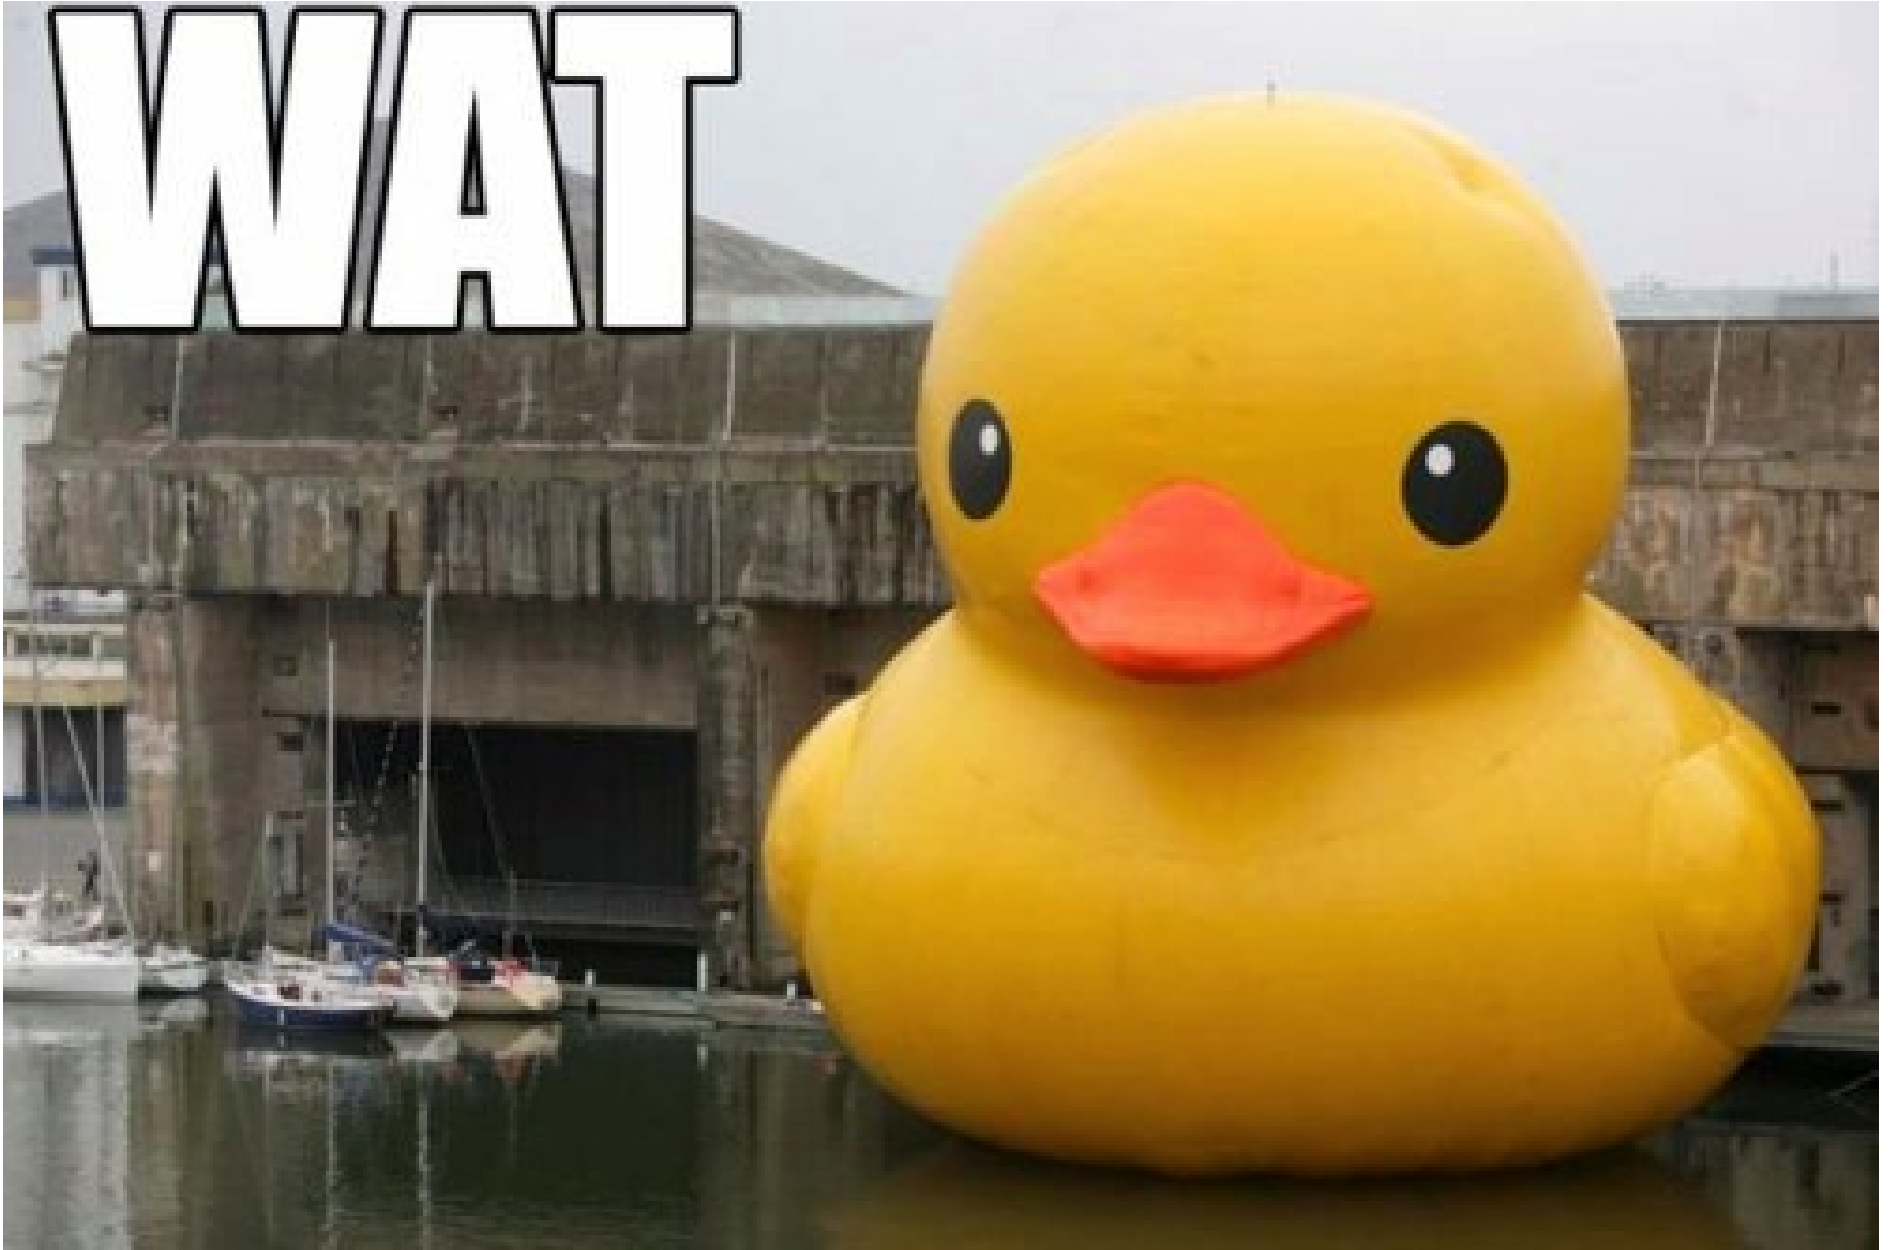

“we've got fun and games”

What is Javascript?

JavaScript is a prototype-based scripting language that is dynamic, weakly typed, and has first-class functions.

WAT

Let's try that again...

- Client vs. Server side
- Why Javascript?
 - Change HTML code in the browser
 - For asynchronous HTTP requests
- Where should I use Javascript?
 - Event handlers
 - Callbacks and triggers

The Calculator

- What's on tap for tonight?
 - Make the number buttons come alive
 - Make the operator (+, -) come alive
 - Make the equals button execute the input

Let's get started!
